CMSC 447: Software Engineering I

Team Working Agreement

Project: PunchList Pro, an Architectural/Engineering Punch List Documentation Software
Team: 6 Date: September 17, 2026

This agreement records how our team will work together for the duration of the semester project. Every member has read it, agrees to follow it, and has signed below. It may be revised at any time with the agreement of all members.

1. Roles & Responsibilities

As a team, we agree that each member owns the following area:

Team Member	Primary Role	Primary Responsibilities
Muhammad Khan	Backend Developer	Authentication, authorization and access control, project and organization data model, offline sync API, database schema.
Satya Thakur	Frontend Developer	I'm handling everything on the frontend — building React components, and the design system inside frontend/src/. I just consume the backend's REST API and Socket.IO events.
Nathan Rubiano	Scrum Master	Facilitate communication between the team and stakeholders. Maintain daily communication via daily meetings or text and aid in development wherever possible.

- Every member owns the status and blockers of their own Jira tickets and writes tests for their own code.
- Roles are primary ownership, not exclusive ownership; any member may work outside their area when the sprint requires it.
- The team lead role (scheduling retrospectives, submitting deliverables) rotates each sprint.

2. Tools

- Day-to-day communication & remote meetings: Discord
- Issue tracker: Jira
- Version control and code review: GitHub (fork-and-pull-request workflow)
- Shared files (SRS, working agreement, and other non-code documents): Google Drive

3. Culture

As a team, we agree to…

- Ask for help when we need it, rather than losing days to a problem another member could unblock quickly.
- Be transparent and honest about progress, including when we are behind.
- Give and take constructive feedback without taking it personally, critiquing the work rather than the person.

4. Communication & Meetings

As a team, we agree to…

- Keep project discussion in the shared Discord server or in GitHub pull request comments, so decisions are searchable later.
- Attend a daily stand-up every weekday at 6:00 – 6:15 (Jira status, blockers). A member who can't attend posts a written stand-up in Discord beforehand.
- Attend a weekly meeting every Friday at 1:00 – 2:00 (demos, progress check).
- Hold sprint planning at the start of each sprint and a retrospective at the end.
- Mark absences in the shared calendar as early as possible, and join meetings on time.

5. Work Ethics & Rules

As a team, we agree to…

- Commit to a realistic amount of work at sprint planning, and raise it with the team as soon as we know we can't finish something.
- Contribute a comparable share of the work across the semester, even if individual sprints are uneven.
- Give at least 24 hours' notice for a planned absence, and notify the team as soon as possible for an unplanned one.
- Do our own work honestly, per UMBC's academic integrity policy. AI assistance is allowed, but whoever submits a change must understand and be able to explain it.

Version control rules

- Never commit directly to main; work on a branch named for its Jira ticket and open a pull request.
- All pull requests need at least one approval, reviewed within one day, and merge only once CI checks pass.

6. Definition of Done

As a team, we agree that a task is done when…

- It has sufficient automated tests and has been tested on staging.
- It has been peer-reviewed, approved, and all CI checks pass.
- It is merged to main, deployed successfully, and relevant documentation is updated.
- Its acceptance criteria are met and its Jira ticket is moved to Done.

7. Conflict Resolution Plan

As a team, we agree to handle disagreements in this order:

- Step 1: Raise it directly and early. The members involved discuss it in Discord or in person as soon as it comes up. Most disagreements end here.
- Step 2: Bring it to the full team. If unresolved within one working day, it goes on the next stand-up or weekly meeting agenda, and the team decides by majority vote.
- Step 3: Escalate to the instructor. If the team can't resolve it, or a member repeatedly misses commitments without communicating, we raise it with the instructor or TA together.

8. Signatures

This agreement can be changed at any point if all members agree. By typing their full name in the Signature column below, each member confirms they have read this agreement and agree to work by it.

Printed Name	Signature	Date
Muhammad Khan		09/17/2026
Satya Thakur		09/17/2026
Nathan Rubiano		09/17/2026
