Determine Status:

What Has Been Done	- Github Repository set up and tested (all team members can push and pull) - Decided on Project Structure (Frontend, Backend, Databases) - Research/Established best testing frameworks for our project - Defining system requirements - Established Working Rules for the Team - Obtained initial project understandings from stakeholder meetings
What Has Not Been Done	N/A, finished all tasks in Sprint 1
Work Added to Sprint	- Investigation into PDF.js - Designing role-based authorization -
Work Removed from Sprint	N/A, no tasks removed from Sprint 1

Stakeholder Feedback:

- Also what have we learned from this sprint?
  - Gained a basic understanding of how the project should function (ex. PlanGrid)
  - Understanding the best testing frameworks for our project
  - How the user roles interact with the software and one another

Scope of Next Sprint -> Core Field Workflow

Sprint Backlog (User Stories from Product Backlog)	Tasks (User Story Breakdown)
User Login Flow	As a field user, I want to log in with my email and password and be redirected to my role-appropriate dashboard, So that I can access only the features my role allows.
Admin User Provisioning	As an Administrator, I want to create user accounts for team members, So that they can log in (since self-registration is not supported)
Create & List Projects	As an Administrator, I want to create new

	projects and see them listed on my dashboard, So that I can organize punch list work by project.
Project Team Management	**As a General Contractor, I want to add and remove team members from a project and assign roles, So that members gain appropriate project access**
Upload a Blueprint PDF/Image	**As a General Contractor, I want to upload a PDF, PNG, or JPG blueprint and have it appear in the viewer, So that the team can perform punch list walkthroughs on the actual drawings.**
Interactive Blueprint Viewer	**As a field user, I want to view the uploaded blueprint in a zoomable, pannable canvas, So that I can navigate to any area of the drawing to place or review punch pins.**
Drop a PunchPin on the Blueprint	**As a Field Inspector, I want to tap any location on the blueprint to create a punch item at that spot, So that the deficiency is spatially linked to the exact location on the drawing.**
View and Edit Punch Pin Details	**As any project member, I want to tap an existing pin to open its detail drawer with all information, So that I can see, update, and communicate about the punch item.**

Team Highlight / Shout-Outs

- **This Sprint, shout out to Satya for his great assistance in creating the product backlog and directory structure**

Burndown Chart (as of September 28)
